

Project Title

Neuroscience, Play, Art, and Narrative (PAN) Woven Resilience-Enhancement Toolkits for Children

Project Summary

The objective of this project was to synthesize the expertise of our multidisciplinary team to co-create and facilitate the integration of a resilience enhancement toolkit (RET) for children ages 6-8, based largely on neuroscience and the principles of play, art, and narrative (PAN) (Wallace, K. O. & Lewis, P. J., 2020). This toolkit supports children through increasing self-regulation, improving learning, and building healthy relationships, with the ultimate goal of enhancing resilience.

Project Roles

Dr. Nathalie Reid - Principal Investigator
Dr. Lise Milne - Co-Investigator

Project Partners

Alison Lewis
Dr. Patrick Lewis
Karen Wallace
Dr. Bree Fissell
Kiah Holness
Lisa Glines
Whitney Blaisdell

Project Funding

Saskatchewan Health Research Foundation: Connections Grant
